

STR44 STR Periscope - STR Star Layout - Very Compact Integration - Suitable for Crystallization

STR44

The STR44 is the smallest member of the STR family. Its 44 MTP capacity makes it perfectly suitable of small-scale integration, highly miniaturized applications or short time incubation assays.

The STR44 is ideal for protein crystallization work because the stationary cassettes with the Star concept allowing the periscope the only moving part, reducing vibration and movement of the samples. While allowing full remote access on handling and climate functions, you still are able to manually access the cassettes and samples through the large front door for loading and unloading your product. Access through full-sized user door
