StoreX Liconel

The New Liconel based StoreX Series is the markets most contamination resistant incubator family. Liconel technology combines de-contamination properties like copper with the advantage for extremely low aging effects like stainless steel. This insures long-term stability and will help your discoveries to be true and accurate.

What is Liconel?

Liconel is an innovative material specially developed for the incubation chambers.

Liconel is a material that prevents unwanted microbial growth while maintaining protection of probes.

Liconel was specially developed for incubators with integrated handling.

Highlights of Liconel

- Self – decontaminating
- Non – toxic to probes and user
- High long term stability
- Simple maintenance

Specifications

- Material: Alloy
- Principle of operation: Cu++ Ions
- Effect: Contamination free surfaces
- Application: Entire unit, Complete Chamber or only Critical parts
