

STR Periscope

STR44

STR Star Layout
Very Compact Integration
Suitable for Crystallization

STR44 Series

STR44

The STR44 is the smallest member of the STR family. The STR44 has the same width and depth as the STX40. Its 44 MTP capacity make it perfectly suitable of small-scale integration, highly miniaturized applications or short time incubation assays.

The STR44 is ideal for protein crystallization work because the stationary cassettes with the Star concept allowing the periscope the only moving part, reducing vibration and movement of the samples. While allowing full remote access on handling and climate functions, you still are able to manually access the cassettes and samples through the large front door for loading and unloading your product.

Access through the small robotic gate

Access through full-sized user door
